Hello, back in early 2000's I was using VBA 1.7.X and later on, 1.8 Link.

I saw many people hopping on the VBA-M version, so I thought I'd give it a go.

Â

There are 2 huge issues I have with VBA-M:

Â

1) VBA-M is dropping frames. I tried many different settings in VBA-M to get rid of this problem, but I couldn't fix it. I tried different versions of VBA-M, still the same result. This is the reason why I'm still staying with good old VBA 1.8 Link.

Â

2) The speedup on VBA is much slower compared to old VBA versions.

Â

Is anyone else experiencing those issues?

Updated post topic to reflect that these aren't opinions but issues. I'll look into it later.
